### Pollination Notes

Japanese and European varieties of plum do not cross pollinate with each other. European varieties have been known to be self-fertile, which includes Blue Damson, Brooks, French, Green Gage, Imperial Epineuse, Italian, Mirabelle de Metz, Seneca, Stanley, and Yellow Egg. Nadia is a newer variety of Japanese plum/cherry hybrid which seems to be self-fertile but will also do well with a Japanese plum pollinator. The best pollinator for Mirabella de Metz is Blue Damson or Green Gage.

Sour Persian Green plums are considered self-fertile.

### Directions for use of pollination

1. From the left-hand column select a cultivar you are interested in growing.
2. Check across the chart; the unmarked boxes will be a reliable pollinizer for the cultivar you have chosen.
