

## Lucky Bamboo

Lucky Bamboo has become one of the most popular houseplants in the past several years. Bringing the strong interest of ancient beliefs and wellbeing, lucky bamboo plants have found a warm reception in many homes and businesses. They are sought after for their interesting designs and shapes, as well as for their meanings.

For over 4,000 years Lucky Bamboo has been considered a symbol of good fortune in Asian cultures. Its natural ability to thrive in a variety of conditions and to adapt to its surroundings has made this elegant plant a favorite for many years.

In the ancient Asian practice of Feng Shui, which believes that the balance of Earth, Water, Wood, Metal and Fire will bring harmony to our living environments, Lucky Bamboo is valued as a perfect element of Wood, with its tall vertical shape and slender shaped leaves.

**Fertilizer:** We recommend Super Green Fertilizer as the primary source of nutrients. It is formulated specifically for Lucky Bamboo. It is the perfect blend of nutrients. Lucky Bamboo is a very unique plant that requires very little nutrients other than fresh water and Super Green. Add 10 drops of Super Green to your Lucky Bamboo's water to ensure a happy, healthy plant.

**Water:** Water every two weeks. The size of stalks doesn't matter.

### Different Design Meanings

- One stalk alone will attract "Good Luck"
- Three stalks tied together will attract "Happiness"
- Five stalks tied together will bring "Wealth"
- Tiered towers and unique designs will attract "powerful blessings"
