Nijisseiki/20th Century							X								
Reddy Robbin								X							
Shinglo									X						
Shinko										X					
Shinseiki/New Century											X				
Tennosui												X			
Tsu Li													X		
Ublean - European														X	
Ya Li															X

NOTE:

Asian pear trees tend to overbear. Thin the fruit to one pear per cluster to have large fruit. The latest blooming Asian pears will cross-pollinate with early blooming European pears. Most Asian pears are self-fertile. You will have a better crop of fruit if more than one tree of another variety is used.

DIRECTIONS for USE:

1. From the left-hand column select a cultivar you are interested in growing.
2. Check across the chart; the unmarked boxes will be a reliable pollinizer for the cultivar you have chosen.
